Marine. Males. 2nd July 1883.

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf of a book. The paper has a slightly textured appearance with some faint smudges and discoloration, particularly towards the edges. There is no text or other markings on the page.

This image shows a blank, aged, cream-colored page, likely an endpaper or flyleaf of a book. The paper has a slightly textured appearance with some minor creases and discoloration, characteristic of old paper. The left edge of the page shows the binding of the book, and the overall tone is a warm, off-white or light beige.

SPOTLIGHT

Patent Applied For

*705
all
eveready
trading
company*

YOUR Spotlight is specially equipped with a focusing device for adjusting the light beam.

First, light flashlight. Direct spot of light on wall. Then turn end cap right or left until the spot of light is as small and as bright as it can be made. The lamp is then focused.

One extra lamp is contained inside of end cap.

To secure the highest power light beam, specify Eveready Mazda lamp No. 1162 when you buy a new lamp from your dealer. You can identify it by the dark bead in center of bulb.

MADE IN U. S. A

Directions for Operating Brilliant Search Lights

The following will make all points clear even to those not familiar with Acetylene Lamps.

SETTING UP THE LAMP.

Fasten Head Strap to Head Piece, and Hose to Generator and Head Piece. The Hose should pass through Leather Loop on Head Strap. This brings Hose over left shoulder out of the way. Hose can be worn either under or over the Coat.

FILLING.

Unscrew Base of Generator and fill the inner cup with carbide. (Any make of carbide can be used and Miners Size is best being pieces about $\frac{1}{4}$ -inch in size. Half ($\frac{1}{2}$) inch or bicycle size is next best.) Replace, screwing on tight so that gasket will not leak. Fill the water chamber at top with any clean water. In extreme cold weather a teaspoonful of any kind of alcohol added to the water will prevent freezing.

TO OPERATE.

Turn Feed Screw at top of Generator about one turn to the left which causes the water to drip on the carbide and generates the gas. In a few seconds (this will take longer the first time the lamp is lighted) you will smell the odor of gas, then light through chimney hole, or remove the Burner Base when lighting.

TO SHUT DOWN.

Turn Feed Screw to the right until it stops. This shuts off the water and in a short time the flame will burn low and go out. If in a hurry you can then blow out the lamp but there will be an odor of gas for a short time.

NOTE: Acetylene gas is not poisonous. There is no danger as this Generator is absolutely automatic. The Generator gets warm when in operation but this is a natural feature.

CARE OF LAMP.

Keep Generator clean when not in use. Never leave a burned out charge of carbide in the Generator as in time it will spoil the cup. If Generator Base is hard to unscrew heat with a match around the thread and it will come off easily. The Small Hole in the Water Filler Cap should be open as it is the breather. If it clogs due to falling or denting it should be opened or the flame will burn low.

TROUBLE.

If at any time the lamp will not light it may need either water or carbide, if it has both there are only three places to inspect. FIRST: the water may not be dripping. SECOND: the Gas Hose or Gasket may leak. THIRD: the Burner may be clogged. The Candle Flame Burner can be cleaned with a strand of picture wire. The Flat Flame Burner should never have a wire run through it. Simply scrape off the carbon with a knife or brush using care or the burner may be injured.

CONVENIENCE.

The Burner Base, 18-2 or 18-3, is removable for cleaning or renewing the burner. Press locking button, turn base to left until it stops and pull straight down. The open flame may be used for lighting a tent, cabin, table, etc.

To remove a burner, heat it in a flame and twist it out with plyers. To put in a new burner, use a small amount of ordinary paint or mucilage.
